(289) 988-1829

Interaction designer focused on building interfaces at the intersection of AI and human cognition. I prototype tools that make complex information tangible, creating AI-assisted workflows.

CORE COMPETENCIES

- AI-Integrated Interfaces
- Data Visualization
- Browser Extensions
- Figma
- Spline
- Wireframing
- iOS
- UX/UI Design
- LLM API's
- JavaScript, Python, HTML/CSS

Education

Interaction Design – George Brown College

Class of 2026

Work History

Tier 1 iOS Technical Support Advisor

Transcom, Toronto, Canada | May 2024 - August 2025

- Served as the first point of contact for customers experiencing issues with iOS devices (iPhone, iPad, iOS apps), diagnosing and troubleshooting software problems via phone, chat, and email channels
- Guided users step-by-step through solutions for common iOS issues: device setup, software updates, connectivity (Wi-Fi, cellular, Bluetooth), app crashes, account/log-in issues, iCloud, and device syncing
- Escalated more complex or hardware-related cases (beyond Tier 1 scope) to Tier 2 or AppleCare specialists, maintaining clear documentation and context for smooth handoffs
- Maintained high customer satisfaction by communicating solutions in user-friendly language, managing expectations, and following up to ensure resolution

Projects

Locavore — Farmers Market Discovery App

Role: Product Designer / UX Architect **Tools:** Figma, HTML/CSS, JavaScript

- Designed a mobile app connecting conscious consumers with local farmers markets, featuring social coordination ("who's going"), vendor tracking, and environmental impact visualization
- Conducted user research with farmers and consumers, identifying pain points around market discovery and community building
- Created user personas, journey maps, and wireframes; iterated from low-fidelity sketches to high-fidelity interactive prototype (15+ screens)
- Built trust-building UI patterns: verified badges, direct messaging, and transparent pricing to connect strangers in a food marketplace

Image Renamer — AI-Powered File Management Tool

Role: Product Designer / UX Architect **Tools:** Python, JavaScript, Gemini API

- Built a cross-platform desktop app that intelligently renames and organizes image files using AI-generated descriptions. drop workflow with live preview, undo/redo, and real-time folder watching.
- Integrated the Gemini API to analyze image content and generate meaningful filenames while skipping already human-readable ones. Added gibberish-detection logic, tagging, searchable history, and JSON/CSV export features.
- Implemented a tagging system, rename history with search and export, and customizable naming options (case, separators, and instructions).

Medshield — Chiropractic Clinic Management System

Role: Product Designer / UX Architect **Tools:** Figma, React, TypeScript

- Designed a healthcare web application for a chiropractic clinic client, delivering patient management and appointment scheduling functionality
- Collaborated with clinic stakeholders to understand workflow requirements, conducting user research with chiropractors and staff
- Built 40+ reusable UI components with a logo-derived design system tailored to the client's brand
- Delivered fully functional React prototype, validated interaction patterns before handoff to development
